The Pains of an Earnest Practitioner That Took to Technology to Comply and Grow Their Practice

After hours of research, reading reams of datasheets, spending endless nights talking to fellow practitioners like you, it's plain and clear to us that you simply don't have the tools to do your job well. You have enough sophisticated tools. You pay thousands of dollars each month. Still you find yourself dealing with:

Productivity lost forever. No matter what workaround you employ, you don't seem to gain back your old productivity levels. The software has failed you.

Missing information! It's difficult to form a coherent picture and build a complete understanding of a given case.

Stress. On average caregivers spend three hours more per day - trying to get caught up. You leave home at 8pm even if you don't take phone calls or talk to patients.

Mounds of irrelevant data points. The software spits out few hundreds of data points most of which are irrelevant.

No time for patients. Because you're engulfed in the minutiae instead of spending time with your patient taking care of them, you feel let down and underperforming.

These software haven't lived up to their promise. You feel crippled, more like a slave and constantly asking yourself whether these "so-called" digital tools will take your life away permanently.

Don't Fret. Patients and Hospitals Need A System That…

- Provide high quality care by freeing them up to spend more time with patients
- Improve the team-based care by appropriate task delegation features
- Promote an effective care coordination by implementing automatic tracking features for lab orders, consultations and referrals
- Help deploy simple configurable workflows their practice or physician needs
- Decrease their cognitive workload through precise medical decision-making support, context-sensitive real-time data
- Gain sharp insights by enabling sophisticated data analysis and reporting tools that are customizable
- Benefit from cogent patient records from various systems updated real-time
- Establish effective patient engagement by incorporating interoperability between EHR systems and patient
- Integrate telehealth technologies to promote health and wellness, and manage chronic illnesses
- Promote system performance and safety by automating meaningful use alerts

Our Solutions

eBluCare EHR

Outstanding Quality of Care
Doctors, payers, billers, nurses, front office staff and patients are all digitally connected as an effective means to offer impeccable patient care.

Exhaustive Interoperability
We help beyond enterprise interoperability - We enable hospitals, physicians and virtually all pharmacies, labs, and payers in the country work together effectively to provide care continuum.

Multiplied Productivity
Effortlessly improve your productivity by navigating on our 'all-in-a-single-screen' interface incorporating a '3-click design paradigm'.

Top Features
• In-built ICD 9-10 conversion • Instant access to medical history • Helpful visual cues • Clinical decision support • e-labs, e-claims, e-prescriptions • Electronic superbills • Image and document management • Denials and appeals management • Integrated clearinghouse services

eBluCare PM

More Productive Operations
Access patients' medical records; handle appointment requests, billing, and referral requests; monitor lab results; improve communication among peers and patients - all from the convenience of a web browser.

Information at Your Fingertips
With our cloud-based storage, you and patients can access information anytime and from anywhere. Added advantage is the protection from unauthorized access, threats and other hazards of nature.

Numbers Are Everything
Keep your performance and finances in first-class shape with powerful billing, reporting, ERA, batch payments, electronic claim submissions, financial projections, and code and treatment-based revenue analysis.

Top Features
• Full patient encounters • Support for HIEs (health information exchanges) • Rich information repository • Powerful reports • Patient info at a glance • Color-coded scheduling system • Role-based views • Real-time insights • Email and text reminders

eBluCare MBS

Coverage Verification
Verify insurance coverages for patient's insurance benefits from hundreds of government and commercial payers, in real-time and batches, preventing potential loss of time, hassles and revenues.

ICD-10 Ready
Using the right ICD-10 codes radically cuts down claims processing delays and eliminates rejections. eBluCare RCM fully complies with ICD-10 so that you treat your patients without worries.

Powerful Payment Systems
Maximize revenue capture, shorten payment cycle, and streamline billing and collection process with electronic remittance advice (ERA), explanation of benefits (EOBs), and aged accounts receivable (A/R) reports.

Top Features
• Rich dashboards • Alerts for problematic claims • Automatic claim generation • Automatic payment posting • Health care remittance analytics • Daily financial reports • Actionable reports • Extensive payer integration • Primary, secondary & tertiary claims

Patient Portal

Robust Patient Portal
eBluCare features a feature-rich, easy-to-use and HIPAA-compliant patient portal. Using the portal, patients can interact and get valuable health information whenever they want without leaving home or calling their caregiver. They can:

★ Schedule and change appointments from their computer or smartphone
★ Enjoy faster check-ins at the hospital with their pre-filled info
★ Access their complete health history
★ Request for prescription refill online
★ Track visit information

Make better healthcare a reality for your patients.
